

Hello everyone,

Please have a look at the attached files. You will find a questionnaire for HIES2016. I have also attached the data for food consumption (Section 9a) and household rooster. In the questionnaire, you will find that the consumption items are divided into several types (ie, Food grain, Pulse, Fish, Egg, meat, vegetables etc). Also, I am sharing household rooster data.

I want you to provide summary statistics (Mean and standard deviation) of the following variables disaggregated by male-headed households and female-headed households.

1. Total amount spent on Food grain
2. Total amount spent on Fish
3. Total amount spent on Meat
4. Total amount spent on vegetables
5. Total household expenditure
6. Per capita household expenditure

Feel free to knock me if you have any questions regarding this task. Best of luck.
